

Project: Construction of Industrial Warehouse G+1

Document: Technical Specifications for Civil & Structural Works

1. Civil & Structural Works

- **Concrete Grade:** All structural elements (Foundations, Columns, Beams) must use **C30/37 (M30)** grade concrete with a minimum 28-day cube strength of 30 N/mm².
- **Reinforcement Steel:** High-yield deformed bars (Grade 60) must be used. All steel must be free from loose rust and oil.
- **Excavation:** Minimum excavation depth for the main foundation must be **1.5 meters** below the natural ground level as per the soil report.

2. Building Envelope (Walls & Roof)

- **Brickwork:** First-class burnt clay bricks with a minimum compressive strength of 10 MPa. Cement-sand mortar ratio shall be **1:4**.
- **Roofing:** Pre-painted Galvanized Iron (PPGI) sheets, 0.50mm thickness, with 50mm glass wool insulation for heat control.

3. Flooring & Finishing

- **Industrial Floor:** The main warehouse floor must be **150mm thick RCC slab** with a power-trowelled finish to handle heavy forklift traffic.
- **Paint:** External walls must be finished with three coats of premium weather-shield acrylic paint.
